City of Brady Newsletter

JULY 2022

Water Conservation

Stage 2

Due to ongoing drought conditions, The City of Brady is asking our customers to please take voluntary water conservation action by limiting the irrigation of landscaped areas to the following days:

Street addresses ending in even numbers

Sundays and Thursdays

Street addresses ending in odd numbers

Tuesdays and Fridays

Between 8pm and 10am

Customers are requested to practice water conservation and to minimize or discontinue water use for non-essential purposes

Waste Reduction Tips

1. Reusable insulated bottles/cup for beverages on-the-go. Save money and reduce waste.
2. Reusable grocery bags, write BAGS on the top of your grocery list so that you don't forget them at home. Ask for a Keep Brady Beautiful reusable bag at City Hall. (one per household; while supplies last)
3. Purchase products that come with less packaging and/or come in packaging that can be recycled.
4. Compost. Fruit and vegetable scraps, egg shells, coffee grounds, grass clippings, and leaves can all be composted.
5. Avoid single-use food and drink containers and utensils.
6. Buy secondhand items and donate used goods.
7. Shop local farmers markets and buy in bulk to reduce packaging waste.
8. Curb your use of paper: mail, receipts, magazines.

Keep
Brady
Beautiful

Public Drinking Water Notice PWS/1540001/CO

The U.S. Environmental Protection Agency (EPA) has set maximum "allowable levels" for certain contaminants in drinking water. These levels are referred to as MCL (Maximum Contaminant Levels). When the Texas Commission on Environmental Quality (TCEQ) notifies the City that our drinking water supply shows that the allowable levels for certain contaminants have been exceeded, we are required to notify our citizens. This is a mandatory/required quarterly notification regarding contaminant levels of Radium, Gross Alpha (excluding Radon and Uranium) in our drinking water for the time frames indicated below.

Mandatory language for Maximum Contaminant Level (MCL) Violation, COMBINED RADIUM -226 & RADIUM -228

TCEQ has notified the CITY OF BRADY that the drinking water being supplied to customers had exceeded the MCL for COMBINED RADIUM (-226 & -228). EPA has established the MCL for COMBINED RADIUM (-226 & -228) at 5 pico curies per liter (pCi/L), based on a running annual average (RRA), and has determined that it is a health concern at levels above the MCL. Analysis of drinking water in your community for **COMBINED RADIUM (-226 & -228)** indicates a level during quarter one of 2022 of 19 pCi/L for EP003, 40 pCi/L for EP004, 12 pCi/L for EP005, and 12 pCi/L for EP007

This is not an emergency. However, some people who drink water containing Radium -226 and/or -228 in excess of the MCL over many years may have an increased risk of getting cancer.

You do not need to use an alternative water supply. However, if you have health concerns, you may want to talk to your doctor to get more information about how this may affect you.

We are working to correct the problem: The City of Brady has engaged professional engineering services in which probable technical solutions have been derived to reduce radionuclides in the drinking water. The City of Brady expects to return to compliance on or about the year 2022.

Mandatory language for Maximum Contaminant Level Violation MCL,

AVERAGE GROSS ALPHA, EXCL. RADON & URANIUM

TCEQ has notified the CITY OF BRADY that the drinking water being supplied to customers had exceeded the MCL for Gross Alpha (excluding Radon and Uranium). EPA has established the MCL for Gross Alpha (excluding Radon and Uranium) at 15 pico curies per liter (pCi/L) based on a running annual average (RAA), and has determined that it is a health concern at levels above the MCL.

Analysis of drinking water in your community for Gross Alpha (excluding radon and uranium) indicates a level during quarter one of 2022 of 23 pCi/L for EP003; 35 pCi/L for EP004, and 17 pCi/L for EP007.

This is not an emergency. Certain minerals are radioactive and may emit a form of radiation known as alpha radiation. Some people who drink water containing alpha emitters in excess of the MCL over many years may have increased risk of getting cancer.

You do not need an alternate water supply. However, if you have health concerns, you may want to talk to your doctor to get more information about how this may affect you.

We are working to correct the problem: The City of Brady has engaged professional engineering services in which probable technical solutions have been derived to reduce radionuclides in the drinking water. The City of Brady expects to return to compliance on or about the year 2022.

If you have any questions regarding these violations, you may contact Gary Jacobson at the City of Brady at 325-597-2244.

Please share all of this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

Public Meetings

City Council Meetings are held the first and third Tuesdays of each month at 6:00pm at the City of Brady Municipal Court Building located at 207 South Elm Street.

Each meeting includes an opportunity for the public to address the City Council with any issue.
